AB - PURPOSE: To protect software by ciphering a decipher key of  
software with an individual key of a user to obtain assent  
information and enabling only a regular user to decipher the  
decipher key from assent information.  
CONSTITUTION: In a software managing part 1, an individual key of  
the regular user is generated by an individual key generating  
part 3 and is reported, and software of a normal text is ciphered  
with the decipher key by a software ciphering part 5 to obtain a  
ciphered text, and the decipher key is ciphered with the  
individual key by a key ciphering part 4 to obtain assent  
information. Ciphered text software and the decipher key ciphered  
as assent information are transferred to the user. Though  
software presented from the software managing part 1 is copied,  
deciphering and execution without the decipher key are impossible  
because it is ciphered, and thus, software is protected.
